CIS 180 L - Intro to JavaScript - Fall 2006
Homework Assignment #5

Due: THURSDAY, September 7th, beginning of class

Purpose: To practice with some JavaScript objects and their properties

Note: as long as you meet the specifications below, you may add additional embellishments as you wish.

How to turn this in: See instructions in #3 below - you will e-mail me the URL's for your completed pages.

1. Consider the following HTML page (also available from the public course web page, where you obtained this handout, under the name **hw5_prob1.html**):

    ```
    <html>

    <!--
        hw5_prob1.html

        by:
        last modified:
    -->

    <head>
        <title> hw5_prob1.html - by:  </title>
    </head>

    <body>
        <h3> hw5_prob1.html </h3>

        <hr>

        <hr>
    </body>
    </html>
    ```

    Add JavaScript to this HTML page so that, when you are done, you have displayed the value of at least one **document** or **navigator** or **history** of **location** object **property**.

    (remember, you can see examples of displaying such object properties in class examples...)

2. For **hw5_prob2.html**, start with (also available from the public course web page, where you obtained this handout, under the name **hw5_prob2.html**):

    ```
    <html>
    ```

```
<!--
    hw5_prob2.html

    by:
    last modified:
-->

<head>
    <title> hw5_prob2.html - by: </title>
</head>

<body>
    <h3> hw5_prob2.html </h3>

    <hr>

    <hr>
</body>
</html>
```

and add JavaScript so that, when you are done, based on at least one value you prompt the user for, you have **changed** the value of at least one **document** object **property** in such a way that this change is visible to the viewer of this page.

(remember, you can see examples of such "visible" changes to object properties in class examples...)

3. When your pages are ready, send me an e-mail to **sharon.tuttle@humboldt.edu** before the deadline with **CIS 180 JS HW 5** in the Subject: line containing the URL's for your two pages.
