

**CIS 180 L - Intro to JavaScript - Fall 2006  
Homework Assignment #8**

**Due: TUESDAY, September 19th, beginning of class**

**Purpose:** To practice with some JavaScript browser detection

**Note:** as long as you meet the specifications below, you may add additional embellishments as you wish.

**How to turn this in:** See instructions in final item below - you will e-mail me the URL's for your completed pages.

1. Create a web page of your choice; in it, do something visible based on a browser feature that your page detects (using a property of the navigator object)
2. Create a web page in which you detect the name of the client's platform and, depending on the platform, you display a link that might be of interest to someone using that platform. (Check for at least a couple of specific platforms, and give them customized links --- then you can have an "else" leading to some other link for all other platforms.
3. When your pages are ready, send me an e-mail to **sharon.tuttle@humboldt.edu** before the deadline with **CIS 180 JS HW 8** in the Subject: line containing the URL's for your pages.
