<div align="center">

CIS 180 L - Intro to PHP - Fall 2006
Homework Assignment #6

Due: TUESDAY, November 28th, beginning of class

</div>

Purpose: practice with PHP and sessions

Note: as long as you meet the specifications below, you may add additional embellishments as you wish.

How to turn this in: See instructions below - you will e-mail me the URL's for your completed pages.

Hoo-hah -- **try_trio.php** successfully demonstrates using **session_start()** and **$_SESSION** to pass information between a sequence of 4 "screens" ("trio" in this name refers to the three questions asked of the user... 8-)) You can find its code along with this handout --- you can run it using:

http://redwood.humboldt.edu/~st10/try_trio.php

For this assignment, construct a different sequence of at least 4 "screens", in which:

*   at least one piece of information is obtained from the 1st "screen" and visibly used in the 3rd and/or 4th screen because it has been appropriately stored within the $_SESSION array during the 2nd screen;

*   either a hidden parameter or another $_SESSION variable (or, even both, if you'd like) are used to help control what screen appears next;

*   use functions for each screen to better modularize your code, make it more readable, and better manage complexity.

When your PHP page or pages are ready, send me an e-mail to **sharon.tuttle@humboldt.edu** before the deadline with **CIS 180 PHP HW 6** in the Subject: line containing the URL's for your **php** page(s) on REDWOOD (unless you happen to be using the Oracle database on redwood for your sequence, in which case put your **php** page(s) on SORREL).
